Professional Summary

Versatile Full Stack Developer with 2+ years of experience building scalable, high-performance web applications using Angular, Node.js (Express), and Laravel. Specialized in frontend architecture, component-based design, and REST API integration. Experienced in managing and administering SQL databases (SQL Server), and in building cross-platform mobile applications with Flutter. Fast learner with a strong problem-solving mindset and a passion for crafting impactful digital experiences.

Skills

Angular, Node.js (Express), Laravel, JavaScript, TypeScript, Full Stack Web Development, API Development & REST Integration, Enterprise Resource Planning (ERP) integration.

SQL database management and administration (SQL Server), Cross-platform mobile development with Flutter (Dart), Redsys payment gateway integration, Git, Continuous Integration/Continuous Deployment (CI/CD) with Azure DevOps. Process Automation & Optimization, Quality Assurance & Systems Validation, Cross-Functional Collaboration, User-Centric Design.

Experience

Full Stack Engineer | Kong Consulting - Seville, Spain | 03/2024 - Present

- Built and maintained scalable web applications using Angular, Node.js, and Laravel.
- Developed internal tools focused on enhancing UX, performance, and operational efficiency.
- Designed reusable components, integrated REST APIs, and optimized frontend workflows.
- Administered and managed SQL Server databases, ensuring high availability, integrity, and performance.
- Led deployment processes using Azure DevOps, automating Continuous Integration/Continuous Deployment (CI/CD) pipelines and streamlining production releases.
- Integrating the Redsys payment gateway for secure checkout processes (in progress).

Key Projects at Kong Consulting

Self-Service Kiosk Ecosystem (Full Suite) — Live

Developed a complete ordering and management ecosystem for quick-service restaurants, made up of several independent modules that can run standalone or fully integrated with the Enterprise Resource Planning (ERP) system:

- Interactive self-service kiosk for customer order-taking, running standalone or integrated with the ERP.
- Centralized management panel for remote device administration (kiosk onboarding, configuration, and monitoring).
- WPF desktop application for the Point of Sale (POS) and kitchen order display system.
- Queue management system with a calling/paging system, including station and category management.
- Digital signage management panel for controlling content displayed on in-store screens.

Live across 2 locations with 3 kiosks each, alongside the queue management system.

Mobile Time Tracking System (Geolocation-enabled) — Live

Built a mobile time tracking system with geolocation, allowing employees to log work hours accurately and manage attendance directly from their phones. Migrated the application to Flutter, developed entirely by me, delivering a native, higher-performance cross-platform (iOS/Android) version. In use by 18 companies (avg. 20-50 employees each), between the Flutter app and the PWA version.

Work Order & Construction Management App (ERP Integration)

Created a mobile app for managing work orders in construction, integrated with the ERP system for seamless data sync, task updates, and report generation.
